EDUCATION

Bachelor of Technology in **Computer Science**,VIT Vellore **8.39** (2021-2025)
High School (**PCM** with **Python**), DPS Vasant Kunj **87.4** (2018-21)

SKILLS

Programming/Scripting Languages C/C++, JavaScript, Java, Python, SQL, Bash
Frameworks/Tools Strands Agents, AgentCore, React.js, MCP, Next.js, React Native, Docker
Certifications **Certified AWS Solutions Architect and Devops Engineer**

EXPERIENCE

SDE 1 - Intelligent Systems and Artificial Intelligence (Philips, Chennai/Bengaluru) Feb '26 - Current

- Architecting and leading development of SENSEI, Philip's first profitable Agentic AI platform in North America, generating €15M+ in annual revenue by leveraging multi-agent LLM systems, custom MCP infrastructure, and enterprise workflow automation for imaging device sales.
- Designed and implemented the platform using React, Node.js, AWS, Agent Strands, MCP, and RAG, while building AI observability and agent analytics for multi-layer agent systems through end-to-end tracing, log analysis, and performance evaluation, reducing imaging device deal turnaround from 3 weeks to 2 days.
- Mentoring 3 interns while co-driving enterprise AI process transformation with the Chief Innovation Officer.

Innovation Engineer 1 - Innovation and Automation (Philips, Chennai) Jul '25 - Feb '26

- Shipped an end-to-end Agentic MR Machine order automation platform for the North America market, eliminating manual workflows and delivering euro 400K in annual cost savings, built with AI Agentcore, Claude and Python.

SDE Intern - Innovation and Automation (Philips, Chennai) Jan '25 - Jul '25

- Built a real-time translation tool with OCR support for text and documents, embedded directly into Outlook and the browser adopted across multilingual workflows at Philips.

SDE Intern (AVL India Software, Gurugram) Aug '23 - Nov '23

- Developed production grade React.js dashboards for Daksh IIOT, replacing legacy AngularJS modules.
- Managed AWS based deployment and releases, and resolved critical bugs across frontend and PostgreSQL backed services.

Backend Intern (Bar Code India, Pune) May '23 - Aug '23

- Built a CDN in python from scratch, handling high volume traffic and improving content delivery performance by 10%.
- Built a scalable React Node.js fullstack solution integrating IoT devices with backend ML systems for real time analytics.

Entrepreneur Aug '21 - Jan '24

- Co-founded Houzie, a web and mobile real-estate platform built using Next.js, NestJS, React Native, Supabase, Twilio, and DigitalOcean to digitize agent workflows by replacing manual ledgers and enabling property discovery via videos. .

PROJECTS

Vit-ID - (Kotlin, Python, Node.js)
An Android-ML project with features like NFC, Image Scanning, etc., that acts as a social network for VIT students. It includes features like chatting, grouping, sharing, etc.

J-Mart - (ReactJS, WorkerJS)
A volunteering-based distributed market where users can pay for computational powers. Uses Worker.js and Socket.js to provide computation necessary and incentives for the work.

Poke'Em - (React Native, ReactJS, Expo, Firebase)
'Poke' feature combines screen-time awareness and social accountability to promote digital well-being, allowing friends to suggest notifications if a person uses a marked app excessively. This project won a hackathon.

AWARDS AND EXTRA CURRICULAR

- Team secured 3rd Position at MLH sponsored DevJam22 VIT (24hrs Hack), won a cashprize of Rs 50,000.
- Represented India and won 7 medals at international debate competitions held at Yale University and Malaysia (WSC).
